## **2° Degrees: Design for Climate Adaptation Key Neighbourhood Maps**

by John Mongard Landscape Architects, November 2019

These key maps were prepared from readily available public sources and provide a base for communities to think and collaborate on climate adaptation at the neighbourhood scale. Equivalent maps can be prepared to run similar workshops in any part of Australia.

**KURILPA AREA MAP - Selected Areas For Climate Action Workshop Shown In Red Circles**

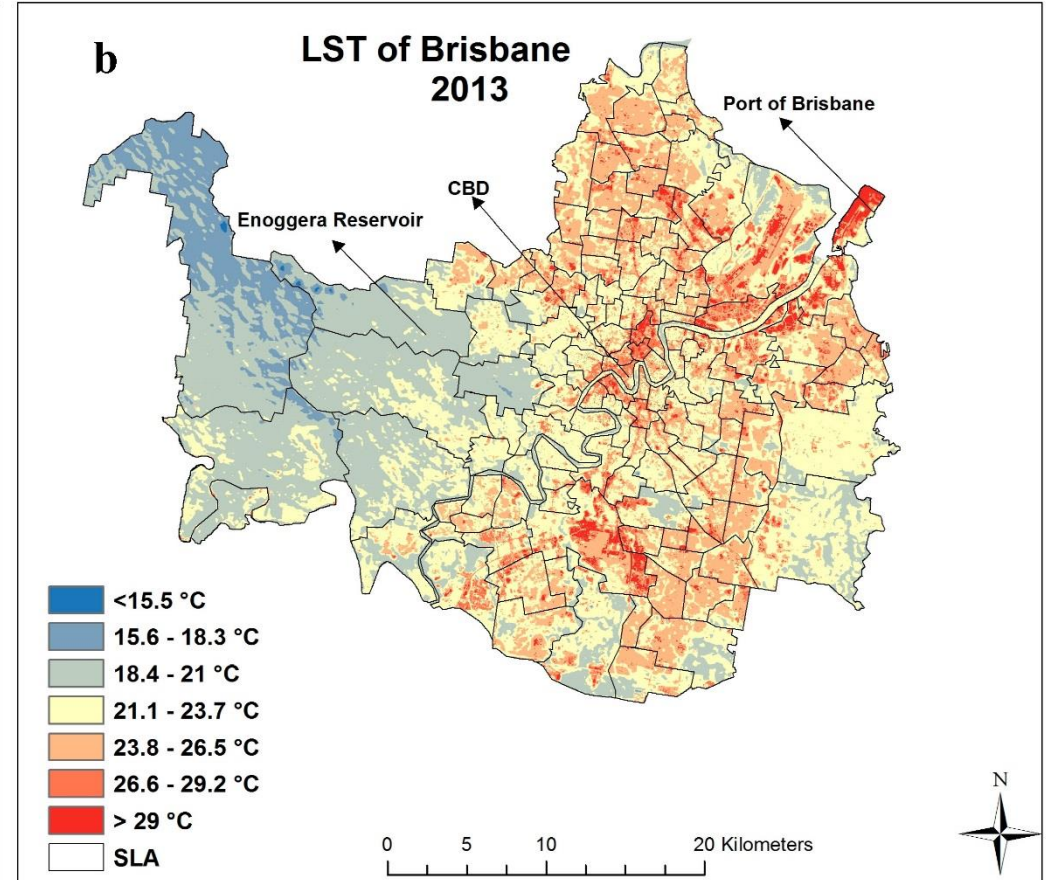

**Notes on maps:** Seven areas are selected for brainstorming different parts of a neighbourhood. Aerial and street views can easily be created from the internet: communities can create their own sub-precinct maps. A typical area or sub-precinct is easier to brainstorm than a whole neighbourhood and comprises an area of about 3 or 4 streets. A typical set of aerial and street views for one area are shown at the back of this set of maps (For example, The Boundary Street Precinct).
